Work Report-2: Image Degrader

Project Title: Image Super-Resolution Using a Deep Learning-Based Model
Group: 4
Name: Meheraj Hasan, ID- 2031742642
Date: 06-11-26

1. Task Overview

The objective for this phase was to adding a Python script (degrade.py) that converts high-quality images into low-quality versions using realistic degradation techniques: downscaling, blur, posterization, noise, and aggressive JPEG recompression.Useful for testing, data augmentation, and simulating compressed images.Includes a CLI with configurable settings and a requirements.txt.
